## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 18 and 19 are rejected under 35 U.S.C. 102(e) as being anticipated by US patent no. 5,840,600 to Yamazaki et al..

In regard to claim 18, Yamazaki teaches a semiconductor device having a semiconductor-insulator obtained by depositing an insulator film on an underlying semiconductor surface, wherein the interfacial level density of the semiconductor-insulator junction is  $10^{12} \text{ eV}^{-1} \text{ cm}^{-2}$  or less

Art Unit: 2818

as a result that the insulator film is deposited on the underlying semiconductor surface after a treatment that reduces interfacial defects on the semiconductor-insulator junction utilizing a reaction of a treatment gas supplied with a substrate having an underlying semiconductor via a thermal catalysis body provided near the substrate at column 20, lines 22-34; column 31, lines 35-42; and column 32, lines 49-60.

In regard to claim 19, Yamazaki teaches a semiconductor device having a semiconductor-insulator junction obtained by deposition of the insulator film, which is carried out in the same process chamber after the treatment and utilizes a reaction of a deposition gas supplied with a substrate via and the same thermal catalysis body at column 31, lines 35-52.
